In 1920  
this Chevrolet 2-door  
Sedan Cost

**\$1795.00**

COMPARE the  
Chevrolet of

seven years ago  
with the Chevrolet of today and realize  
how radically Chevrolet has revised all  
conceptions of motor car value.

In 1920, the Chevrolet illustrated here  
represented the highest standards of  
quality and value . . . at a price of \$1795  
(f.o.b. Oshawa) . . . over a thousand dollars  
more than you pay today for a Chevrolet  
that possesses style, luxury and refinement  
unthought-of in any car a few  
years ago.

In following its fundamental policy of constant  
improvement, Chevrolet has built up a production  
volume which places it first among all cars  
in the world. And Chevrolet has shared the  
savings of volume purchasing and production, with  
the public by reducing the prices of Chevrolet  
cars.

So, today, you get a Chevrolet with amazing  
QUALITY in its every detail at a fraction of the  
cost of a similar model Chevrolet of seven  
years ago.

## CLARESHOLM

## Claresholm Victorious in Second Challenge Series

High River Beaten in Two Consecutive Games—Lewis  
Fans Seventeen Batters in First Game Visitors Out-  
classed by Locals.

Claresholm successfully with-  
stood the second challenge to  
their title as holders of the Brew-  
ery Cup when they defeated High  
River in the two games staged on  
Tuesday and Wednesday.

The first game was the more  
interesting of the two, the home  
team winning by 3 to 1. The  
great feature of the game was the  
snappy pitching of Dodger Lewis,  
snappy pitching of Dodger Lewis,  
who fanned 17 of the High River  
boys and held them down tight  
throughout the game.

In the first inning the challeng-  
ers opened with one run. Kirk,  
however, evening the score for  
Claresholm. With one man down  
in the third inning a smart bit of  
double play between Lewis, Car-  
rigan and Thompson disposed of  
the remaining High River bat-  
men, but Claresholm was unable  
to score.

The fourth was unproductive  
for High River, one man getting  
as far as first base. Giddes failed  
to register. Dodger then con-  
nected for a single, made third on  
a two base hit by Oszust and got  
home on a beautifully judged  
hit by Scott, who, however,  
could not each first. The inning  
closed with the fanning of Reid.  
Dodger now seemed thorough-  
ly warmed up and struck out his  
three men in the fifth in quick  
succession, but Kirk, Carrigan,  
and Thompson were unable to  
lengthen the score for Claresholm.

In the sixth an error by Carri-  
gan let one man through to first  
but the visiting team failed to  
register further hits against the  
Claresholm pitcher. Dutch Gann-  
er then swung for a good three  
bagger. Giddes was held, but  
Lewis sacrificed and Gannor  
brought the score to 3 to 1.

In the seventh Lewis again  
held down High River but Claresholm  
was unable to add to the  
score though hopes ran high.  
With one man down and Reid on  
first base, Carrigan connected for a two  
bagger. Reid made for home but  
Carrigan was unable to connect  
and the inning closed.

The eighth was unproductive  
and somewhat uninteresting as  
the High River boys seemed to  
have lost hope. In the ninth  
High River was disposed of with  
no score, the game going to  
Claresholm with the final score  
of 3 to 1. The box score is as  
follows:

High River								
	A	B	R	H	P	O	A	E
Wissler, cf.	4	1	1	1	0	0	0	0
Thompson, 2b	4	0	2	1	2	0	0	0

Second Game

The game was not so interest-  
ing or exciting as the first one,  
mainly because the High River  
pitcher, Wissler, did not seem to  
be at all in form.

High River opened with one  
run in the first inning. Gannor  
seemed unable to locate the plate  
and Thompson and Gannor were  
given their bases. Giddes con-  
nected and reached first on an error.  
With bases full, Lewis stepped  
to the plate amid great excite-  
ment and managed to bring  
home Thompson and Gannor.  
Paul Oszust then took his base  
but with the bases again full

Wissler fanned Scott and the in-  
ning closed with the score stand-  
ing at 2 to 1.

In the second inning the three  
High River batsmen were caught  
on flies, but Claresholm was un-  
able to reply with a score. On er-  
rors by first baseman and catcher  
Kirk reached third, but with two  
men down Thompson was unable  
to score a hit.

High River seemed dangerous  
in the third inning, but a smart  
play between Carrigan, Scott and  
Thompson quashed the High River  
attack. Gannor failed to reach  
first but Giddes hit a single and  
Lewis reached first on an error  
by the right field. Oszust con-  
nected for a two base hit but Ged-  
des still failed to reach home.  
Scott took his base but Kennedy  
was caught on a fly, and the in-  
ning closed.

High River failed to score in the  
fourth. With Claresholm out to  
bat the ball was changed, owing  
to it having been cut but Wissler  
still seemed unable to find his  
length and Kirk was walked.  
Carrigan was suffering from a  
twisted knee but reached first on  
the pitcher's error. Thompson  
then registering a hit and mak-  
ing bases full. Gannor was hit by  
the ball and Kirk came home.  
Lewis bunted beautifully between  
the pitcher and first and Kennedy  
(running for Carrigan) and  
Thompson came home, making  
the score 5 to 1.

High River scored a three bagger  
with one man down in the fifth  
but failed to score owing to smart  
team work by Gannor and Lewis.  
Claresholm replied with a single  
by Kirk who got home on the  
pitcher's error, bringing the score  
to 6-1.

High River scored two home-  
ers in the seventh inning on a  
smack by Wissler. Gannor then  
got a base by a well judged shot  
to left field. Lewis was put out,  
but Paul got a two bagger. Scott  
was hit on the leg by Gannor,  
running for Giddes, got home on  
the catcher's error. Kennedy fanned  
but Kirk connected for a shot  
past second baseman who failed  
to retrieve, and Scott Oszust re-  
gistered home. The game was  
then called for darkness by Um-  
pire Spud May, the final score  
standing at 9-3.

The box score for Wednesday's  
game is as follows:

	High River

## BASEBALL DANCE

A dance in the I. O. O. F. hall  
was given by the baseball club  
after Wednesday's game and was  
well attended. The Blackbirds  
orchestra did their stuff most  
creditably and everybody seemed  
to be enjoying himself or herself.  
Lunch was not served in the hall  
run. With Kirk and Carrigan  
but the dancers were able to find  
refreshment in the town restaur-  
ants. The affair ended at about  
12 a.m.

## For Three Meals a Day

You can cut from loaves of  
our bread for the three meals  
each day every day of the  
year and know that each  
slice will be devoured and  
enjoyed by every member of  
the family. Of course you  
can vary the kind of bread  
you serve because we make  
several kinds, including raisin  
bread. You know how  
the children love it. Use our  
bread exclusively.

## CLARESHOLM BAKERY

The Wawanesa Mutual Insurance Company's policy  
has always been, since its organization thirty years  
ago, to give to its patrons fire protection, at the lowest  
possible cost, consistent with safety.

And we are pleased to announce that from now on  
the cash rate on farm buildings will be reduced 25c  
per \$100.00 for three years. This makes our cash  
rate \$1.25, or \$1.00 per \$100.00 if your house has  
lightning rods and basement chimney.

Our assessment note plan requires no money down.  
And this year the rate is fixed at 20% or 40c per  
\$100.00 for one year.

## CANADIAN PACIFIC

## Opening Up of Western Canada Has Been the Greatest Factor In Development of the Dominion

It is generally agreed throughout Canada that the opening up of western Canada has been the greatest single factor since Confederation in the raising of Canada's material and moral life. A major portion of the change in the complexion and stature of Canadian trade abroad, and in the entire field of domestic industry, is traceable directly or indirectly to the agricultural expansion in Western Canada. Agriculture is the basic industry of the Dominion. It has exercised the greatest influence upon both the degree and the direction of Canada's material progress. The Dominion is now the world's largest exporter of wheat and oats. In the production of other grains, in dairy products and in the other yields of farm and orchard, Canada holds an important place. Wheat, however, has been the dominant powerful factor in attracting population and capital to the Dominion. Its bringing virgin areas under cultivation, in widening the market for domestic manufacturing, mining and other industries, in building up the volume of export trade, in increasing the purchasing power necessary to finance the substantial imports of a variety of commodities, wheat, too, has proved a veritable economic tonic to the country as a whole.

At the time of Confederation, the total production of wheat in the Dominion was 15,000,000 bushels. Last year the yield totalled 410,000,000 bushels in round figures. Most of the wheat crop is now marketed by the Canadian Wheat Pool, a farmer's co-operative organization, the largest of its kind in the world, which has the support and sanction of the Canadian farmer. The growth of every branch of agriculture and horticulture in recent years has been phenomenal. Last year the total value of agricultural products was in the neighborhood of one hundred million dollars. The value of the field crop alone in 1926 has been computed at \$1,217,467,000, and these figures do not include hundreds of millions worth of dairy and other agricultural and fruit products.

### Foot and Mouth Disease

**Outbreak in England Will Prevent Importation of Stock**  
The department of Agriculture, Ottawa, announces a new outbreak of foot and mouth disease in England at Washington, Toronto, and St. John's. Many persons have been issued for the importation of pure bred cattle, sheep and swine from Great Britain, this season. As a result of this new outbreak, will necessitate the holding up of these importations. Import at least as those from England are concerned, until that part of Great Britain is once again free from this disease.

In the case of importations coming from Scotland, it is not the intention of the department to stop importations on condition that affidavit can be made to the effect that the stock being shipped from Scottish ports has not been in England within 60 days of export, nor been in contact with cattle coming from England within that time. Further, it will be required that boats carrying such cattle from Scotland must not touch at English ports after loading.

### Canada's Wealth

The population of Canada is now about one hundred and twentieth of the estimated total population of the world. Yet this small proportion of present population produces 88 per cent of the world's wheat, 35 per cent of its cattle, 25 per cent of its sheep, 20 per cent of its corn, 18 per cent of its oats, 15 per cent of its horses, 11 per cent of its wheat and 11 per cent of its barley. Canada today ranks seventh among the great nations of the world as regards wealth. Between 1870, three years after Confederation, and today, Canada's national wealth has increased tenfold.

### Write Prize Poem As Aids

"I did it for a job," said Miss Gertrude E. Trevelyan, an under graduate of Lady Margaret Hall, Oxford, who has won the Wendell prize for English poetry for the first time that it has been won by a woman. The poem is 250 lines in blank verse and the title is "The Wanderer." Miss Trevelyan had written little poetry before.

Among the polemic on the exclusive West End of London are experts in the German, Spanish, French and Italian.

W. N. U. 1620

### Good Seed

**Now Is the Time to Secure Good Seed For Next Year**

Now is the time to take steps to secure good seed for next year, states Mr. P. R. Kerner, cerealist at the Central Experimental Farm. The best part of a wheat, oats or barley field should be stalked off to be harvested separately. Any heads that are off type, weak or diseased heads, other cultivated plants and weeds should be pulled, going over the plot at least three times until it is clean. Before harvesting a crop should be cut around the plot to facilitate a separate harvesting. The blower must be thoroughly clean before the cutting and the plot stalked and threshed by itself. The threshing must be absolutely clean, and the seed put directly into clean bags. If the grain is not dry, the bags should be only partially filled and not too many piled together. The bags should be turned over daily until the grain is dry. Early in the winter the seed should be thoroughly cleaned using a scrupulously clean fanning machine and clean bags.

### Plan For Developing Empire Settlement

**Cities of Britain Urged to Work for Namesakes**

The British Empire League has issued a brochure appealing to mayors throughout Great Britain to co-operate with the mayors of their namesakes and other cities in the Dominion in order to develop Empire settlement. Lieut. Col. L. C. Anney, secretary of the league, declares that the problem of distributing the population of the British Isles in other parts of the Empire is one of the first necessities of the Dominion. "We must have sympathy with the views and aspirations of the Dominions and they with ours," he says.

### Latest Thrill in Mountain Motoring

One of the most spectacular drives in the Canadian Rockies is the Kicking Horse. The automobile has followed the route through one more barrier of the Canadian Rockies. Forty-two years ago the first automobile slipped down the lower Kicking Horse canyon from Field into Golden and the Kicking Horse. This year the automobile will follow. It is another substantial step towards the direct Calgary-Vancouver Highway.

Leaving Field the new road follows the railway down the wide valley of the Kicking Horse, located about 100 miles from the mouth of the Kicking Horse. The road is a long, straight, level road, looking across the snow-capped Van Horn range, with the Kicking Horse in the distance ahead.

Between Field and Laramie, the valley of the Kicking Horse is fairly open, but almost before the motorist notices it, he has left a bit of a mountain and begun to climb and in a few minutes he is perched on the mountain side. The railway line, from 200 to 700 feet below, is in plain view and the motorist can see the valley of the Kicking Horse. The road is a long, straight, level road, looking across the snow-capped Van Horn range, with the Kicking Horse in the distance ahead.

The drive through the canyon is thrilling. The traveler's scales might be thrown and looks upon vistas of indescribable beauty. Nature has done some of her most gorgeous scenes painting. Pine-clad mountain sides are variegated with splashes of poplar that relieve the somber tones of the conifers. Nature has splashed her brush over the many-colored rocks and shadows.

But her masterpiece is the climax at the finish. When the canyon reaches its widest stage, when highway and railway seem to be almost crowded out, suddenly one is looking out over the wide valley of the Columbia. The great river flows rapidly on the floor of the valley, slowly making its way north along its sandbar strewn bed to the mighty sweep around the Big Bend.

Those who make the trip from Field to Golden will agree that the 17 mile drive from Golden to Golden and Golden will not take second place to any other part of the Alpine Trans-Canada highway for spectacular thrills and scenic grandeur.

### German Polls Are Strict

Prussian men have to sleep police regulations under the still flourishing bureaucratic system of the German Government.

The widow of Erich Wadowa, a Charlottenburg merchant, who died recently, has just received the following letter from police headquarters:

"It has come to our notice that your deceased husband gave up his business in Wendeckstrasse, Charlottenburg, without reporting this fact. Kindly explain the neglect."

### Many Difficulties Faced By Surveyors

**People Steadfastly Resist Conditions Which Have to Be Overcome**

The difficulties which have to be overcome by government surveyors in the performance of their duties are seldom realized by the layman. During the recent running of the international boundary line between Alberta and British Columbia the work in the Alberta Pass was greatly delayed by bad weather and untoward conditions.

It started for eight days in succession and the work had to be carried on with 21 inches of wet heavy snow on the floor of the valley and from 2 to 3 feet on the hillsides above timber line. Large trunks had to be shovelled out to the higher mountain sides and levee most of the time the temperature was below freezing; concrete had to be made with hot water so as to overcome the freezing condition of the gravel; and hot rocks had to be laid round the concrete in order to permit it to set. At times it was found impossible to use horses and the men had to pack the equipment and materials. Notwithstanding all the difficulties, at the most exposed stations above timber line, the work was completed in a remarkably short time.

### Record In Gold Product

**Canada's Output For Last Year Worth Over Thirty-Six Millions**

Canada's gold production in 1926 again established a new high record, with a total of 1,247,278 fine ounces, which was worth \$36,262,310 as against the 1925 production of 1,735,725 fine ounces, worth \$25,900,926. According to a report of the Mining, Metallurgical and Chemical Branch of the Department of Statistics, Ontario constituted most of the output, or 1,497,216 fine ounces, an increase of 34,776 ounces over the 1925 total, setting a new high production mark for the province.

### Thrift of School Children

Canadian boys and girls now at school have \$97,862 on deposit in the Penny Bank. One year ago, they had only \$75,154. The boys and girls have thus increased their savings by \$12,708. The figures are striking in that they have increased appreciation of the value of thrift by young people. The habit of saving instilled early in life is one of the most potent factors making for happiness in old age.

### The Poor Sellers

When the Omaha Chamber of Commerce held a spelling bee it discovered that highbrowed men made many mistakes in spelling. But they probably could spell "moores" correctly—Bismarck Transcript.

## Hon. C. A. Dunning Explains Object of Aerial Expedition To Collect Data on Hudson Strait

### The Right Time To Harvest With a Combine

**Grain Must Be Dry and Hard Before Cutting**

The only safe rule to follow in grain harvesting is to wait until the majority of the grains in the field are dry and hard. This was made plain in a series of investigations conducted at the Dominion Experimental Station, Swift Current, Sask., the results of which are detailed in a Dominion Department of Agriculture pamphlet entitled "The Combined Harvesting in Western Canada."

In harvesting with the combine the grain is threshed at the same time as it is cut. It is therefore necessary, when the combine is used, to let the crop stand from 10 to 15 days after the binder might have been used. In the case of the combine, the grain must be cut and threshed in one operation, leaving no time for loss of grain from being graded as damp or soft. If the weather is dry and warm this period might be shortened to 8 days, but if it is damp and cool the stand should be for as much as 25 days.

An attempt was made in the experiments at the Swift Current Station to shorten the waiting period, and thus eliminate part of the risk from delay. Part of the crop was cut and threshed for only a few days after the binder might have been used. The results showed that these methods were satisfactory, and that the grain was not lost from being graded as damp or soft. It is important to wait for the full time after the date when the binder might have been used, cutting with a combine at night or even a half day later may mean the difference between straight and tough grains.

### A Joke That Paid

**Action of Italian Laborer of Lifting Weight Paid to Science**

When an Italian laborer lifted a piece of cheese at a fellow worker, he little knew that his action was to be of lasting benefit to his employer and to science.

The photograph makers for whom he had posed a model had been in the hardness of the copper discs from which photographic records are developed. When they sent samples of the discs to be analyzed, the presence of an organic matter was revealed. On enquiry it was found that the man had raised a piece of cheese and had fallen into the tank in which the metallic discs containing photographic records were being plated. The fact was that the man was in the case in the cheese.

They now add this material to their collection and the increased hardness of the copper allows a considerable saving, because new records can be stamped in motion was from the harder discs.

### Russia Purchases Horses For Cavalry

**Western Mustangs Said to Be Particularly Sought For This Purpose**

Canadian horses numbering 1,400 are being shipped to Russia. The purchasing agents from Russia have been in British Columbia and Alberta, selecting these horses. From information received these horses are of the Russian variety.

The Canadian horses and particularly the mustangs that run wild on the prairies are particularly suited for cavalry uses. Owing to their ability to stand mile after mile of fast traveling, the Soviet Government is going to considerable expense in buying and transporting these animals from Canada.

### Wolves Menace Russia

Wolves last year killed 20,000 head of cattle and more than 20,000 sheep and goats and other small domestic animals in Russia. The Commissariat of Agriculture has announced. The rate around the city in a tax on the route to be followed by the wolves is \$10, as compared with \$5 by the air route.

"You look dejected."

"Yes, married life gets on my nerves."

"No. Married living."

"No. The wedding takes place tomorrow."

"What! You've cut off your most beautiful attraction—your look!"

"Well, I can tell you now—I wasn't."

Canada's wealth is increasing at a rate unequalled by any other country—\$1,000 per capita in 1902, \$2,525 in 1926.

It is easier to acquire a good reputation than it is to keep the friends off it later.

## ANSWERS TO LAST WEEK'S QUESTIONS

190. How Many Chinese in the U. S. Today?

First Chinese emigrants arrived in San Francisco in 1848. By 1900 they numbered 100,000; since then there has been a gradual decrease, the census of 1920 showing 61,000. The number of students, however, has shown a constant increase, from 1900 to 2,600 in 1922. More than two-thirds live in towns and cities, mostly on the Pacific coast, but there are Chinese colonies in nearly every large city. The proportion of men to women is about seven to one. Many young Chinese bent on adventure and self-perfection, move from city to city, and pay their way by engaging as waiters in the numerous Chinese "hot sues."

191. In What Are They Principally Engaged?

In the western states there are many Chinese tailors, farmers, gardeners; a few domestic servants and miners. Many have been employed in the canneries of Alaska, Washington, Oregon and California. In the larger cities they are engaged mostly in business, there being about 25,000 import merchants. Some are laundries, but the "hot suey" (a poor man's dish of leftovers, in America they serve a large meal at small cost by making a mixture mostly of bulky Chinese vegetables).

192. What Kind of Eyes Have Animals That Hunt?

Are placed in front of the head and close together, are deeply sunk in their sockets, and further protected by dorsal ridges and the powerful masticatory (chewing) muscles at the sides of the head. Thus the binocular (two-eye) vision is large, while the panoramic field is very limited. In hunters which lie in wait for their prey the pupil of the eye is a vertical ellipse, while in those which chase their prey it is round. The frog, which is both hunter and hunted, has frontally placed eyes like the hunters, but they protrude and have crosswise elliptical pupils, as in the case of other hunted animals.

193. What Kind of Eyes Have Hunted Animals?

Are placed on the side of the head and wide apart, while the orbits are shallow, and not protected by ridges or chewing muscles. The binocular field of vision is small, or entirely lacking, while the panoramic field, on the contrary, embraces almost the entire horizon. This enables the fleeing animal to at once see where it is going, while keeping its pursuer in view. In the best runners the pupil forms a horizontal ellipse, which assists in broadening the field of vision. Poor runners, however, which depend more upon craft than speed for their safety have round pupils.

194. The Number of Big Game in North America?

80. National forests contain about 800,000 deer; National parks and National parks approx-

mately 72,000 elk; there are all told about 28,000 antelope, some 2,400 existing in National forests in 10 states; 13,000 shown in 11 in 10 states; 13,000 mountain sheep in 11 states; and 10,000 mountain goats in 4 states. Moose are found in portions of Minnesota and Maine, and fairly plentiful in New Brunswick, Nova Scotia and Northern Alberta, the moose and caribou (American reindeer) being the chief game mammals of Canada. Furbearing animals where protected are showing an increase, and there have been almost exterminated.

195. How Many Air-Passenger Lines in the U. S.

The U. S. now has more than all European countries together—commercial flying average 22,000 miles daily. June 1 the licensed airworthy planes numbered 1,347, with 31,441 pilots not licensed; all told, more than 3,000 planes in private hands.

Daily passenger service between Detroit and Grand Rapids (using Ford-Stout monoplanes, cabinized—) between Los Angeles and Salt Lake City; between Los Angeles and Seattle; between Boston and New York (using large 4-motored planes of the Fokker type); and between Philadelphia and Washington. Several of these lines also carry mail and freight.

196. What Is the Rockefeller Foundation?

The world's biggest philanthropy. Its influence has been exerted in some way almost everywhere civilized country. It is playing a leading part among the world's most useful educational agencies. Its greatest energies have been expended in forwarding medical science and the great work of prevention. Has taken part in the world war against tuberculosis, malaria, typhoid, yellow fever, hookworm and other scourges, lived in many parts of the world, has been practically everywhere. From the time of its charter in 1913 has disbursed, appropriated or pledged close to \$90,000,000.

## Baseball Jottings

At an enthusiastic meeting attended by many local ball fans, Wednesday it was decided unanimously to keep on the ball until the end of August in order to celebrate the 50th anniversary of the first baseball game played in the city.

The Claresholm team are playing the Athletics at Calgary today in a league fixture.

The Regina Balmores who are north of the west today staged a game in Claresholm against the home team on Tuesday evening at 5:45.

## Chinook Gossip

Jim McKie returned from Calgary last Saturday.

Mrs. H. C. Clifton was taken to the Macleod hospital last Friday.

Ed Fraser and family returned from their month's sojourn in the western states last week.

Mrs. and Mrs. Arthur Cummings of Vulcan and Miss Ella Hoge spent a few days with their parents last week.

A bad hail storm passed over this district last Friday. The following are the heavy losses: Geo. Hoge, Frank Hoge, E. Laur, Leo Knudsen, Lee Sammons, Frank McKenney, Bob Truett, Jack Dalby, James Clifton, Jack Clifton, Paul Henker, Joe Baily and McLaughlin Bros.

## 5000 FACTS ABOUT CANADA

Canada's jubilee year, celebrating the sixty years of Confederation, is fittingly emphasized in the issue of "5000 Facts about Canada," the famous tabloid cyclopedia of the Dominion compiled by Frank Yeigh, the well-known Canadian publisher and author. It is a tonic to read of our remarkable national progress, as tersely set forth in this unique booklet, under fifty chapters, from "Agriculture" to "Yukon." The contents are more varied than ever, and will prove a revelation to the reader. No letter-writer of making known our resources, wealth and prospects exists than this publication, and it should have a wide circulation.

## Claresholm Local News

Harry Dow's brother was in town on Saturday.

Jack Bell and family returned from Banff on Saturday last.

Carl Braren and family have returned from their trip to Spokane.

Miss Hood has left for a visit to Calgary, after which she will visit her sister.

Born, at the local hospital on August 9, to Mr. and Mrs. Axel Carlberg, a son.

Born, at the local hospital, on August 10, to Mr. and Mrs. Wesley Leppard, a son.

Arnold Fraser has bought an hotel in Strathmore and will take it over in early September.

J. H. Olson of Staveland took delivery of a new Chrysler '62" this week from the Claresholm Garage.

Miss Frances Sandford has returned from her trip through the States and has resumed dressmaking at Mrs. Gairard's.

Mr. and Mrs. Lester Chatterin and family returned on Wednesday from a motor trip through the States.

Wednesday afternoon was the last official weekly half holiday of this summer here, under the municipal bylaw.

Kenneth Weatherhead of Woodhouse is in the Claresholm hospital suffering from a fractured collar bone.

Bert Hartwell motored up to Banff on Sunday with his wife and family and Sid Knight, a friend from R. C.

Mr. Foster is busy giving extra classes for the members of the high school who intend to re-write their examinations in September.

Joe Peterson and wife of Seattle, Wash., and Ted Peterson of Paulton, Wash., are here for a visit with their sister Mrs. Martin Matson.

Would the party who found a World Book in their car during the Christmas season please oblige by leaving it at Claresholm Review office.

Roy Marshall and his two daughters are motoring to Banff this Sunday. After a few days' stay, the Misses Marshall will return to Saskatoon.

"Perch of the Devil" from Gertrude Atherton's sensational novel, with Pat O'Malley, Max Bosch and Jane Winton, at the Rex theatre Friday and Saturday nights this week.

Mr. and Mrs. D. A. Anderson and family returned on Sunday from their summer trip in Manitoba. In spite of the fact that the children contracted chicken pox, they had a pleasant vacation.

Amended tenders for the building of the covered rink have been asked for in connection with alterations in the specifications regarding roofing and other items. It is hoped that the contract will be signed in about ten days.

The Willow Creek dam near the pipe line is now being reconstructed. Bathing enthusiasts make great use of the boat when it is not in commission by the construction gang, but find that it is hard work pulling back after a merry sail down stream.

Mr. and Mrs. Chester Laing, and Rev. A. H. Eggleston and two oldest daughters, Emily and Elizabeth, motored over to Nohelford on Wednesday afternoon to attend the wedding of Miss Edith Hunt and Rev. W. L. Cross, returning to Claresholm the same evening.

Mrs. Laing and Lefty Lang are leaving town within a few days for Lethbridge, where they intend to run a cafe. Remembering the many dances which they have enjoyed at the Ys Kettle, doubtless many residents will visit them in their new quarters when passing through Lethbridge.

## LAWN DANCE

Miss Edith Murray and Miss Kitty Guy were joint hostesses at a most enjoyable dance given at Tom Murray's residence last Friday night. The guests numbered about 40. During the earlier part of the evening dancing was held on the lawn, which was lit up by lights suspended to the side of the house. Lunch was served at midnight, after which there was more dancing indoors. The hostesses and their respective parents made everything run smoothly and did all in their power to make the party the success that it was.

The guests were as follows: The Misses Florence Atkinson, Bertha Strangways, Margaret McMillan, Frances McKinney, Marion McKinney, Clara Edlund, Ellen Bohl, Eva McAlister, Hilma Strange, Hannah Paulson, Marcel Marlowe, Berrie Gunn, Betty Marshall, Florence Marshall, Lon Hansen (Athena), Ellen Murray.

Messrs. Bob Glasgow, Bert Webster, Ray Anderson, Corneil Hughes, Andrew Scott, Diederik Dickmeier, George Ureselman, Lloyd Lomheim, Gordon Wyatt, Eric Leck, Tommy Hillard, Glenn, Glenn Hansen (Athena), Leonard Shearer, Don Torit, Ralph Honkirk, Cyril McKenzie.

## Goats Important In Canadian Dairying

Stock is the British Empire

Increases in Registration of Pure Bred

Goat raising is a year by year becoming a more important branch of agriculture in Canada and through British Columbia with loads of goats in the breeding of milk goats. In the past year Ontario is credited on the records of the Canadian Goat Society with the greatest increase in the number of pure-bred goat, goats milk. A ready sale at 10 to 15 cents per quart in Vancouver and Victoria.

According to the Natural Resources Intelligence Service of the Department of the Interior at Ottawa, the milk goat may be raised in any part of Canada, and it provides a wholesome milk for the household at moderate cost, while for commercial goats' milk has been recognized as an ideal food for infants and invalids. Many hospitals and sanatoriums keep herds to supply milk for their patients. Butter and cheese made from goats' milk are prized by those who have learned to use them. Their milk and goat meat is excellent for food.

The skins of goats are utilized for gloves and in the production of leathers of fine texture and high value used in bookbinding and etc.

Goats are easily cared for and many kids are successfully attended by children. They occupy an important place in agriculture in many countries of the world. India is credited with a goat population of 20,000,000; Brazil, 10,000,000; Argentina, 7,000,000; Mexico, 4,000,000 each; Germany, 2,500,000 each, the United States and South Africa, 2,000,000 each, etc., and in Canada but 10,000.

There are a variety of breeds of goats, some of which are raised for their wool and are of little use for milk. The principal breeds of milk goats are the Swiss breeds (Toggenburg, Saanen, Alpine, etc.), the Anglo-Nubian and the Mediterranean goats. The three main types concentrated in the goat industry are the Toggenburg, Saanen and Nubian. The first two breeds are particularly good milkers and large numbers of these animals now grow in the goat industry.

## Size of British Empire

Estimates Vary and Exact Area Is Not Known

How large is the British Empire? Scarcely even experts cannot agree, for it is rarely that two reference books give the same area.

The problem does not seem difficult to solve. Official figures exist for each part of the Empire, arrived at through the most careful geographical surveys. To add up the total area of the Empire, therefore, requires no insuperable mathematical task, even for the arithmetically challenged. Yet, the results are never the same.

Take the area of the British Isles, for example. For example, The Statesman's Year Book, which ought to know, gives it at 59,941 square miles, but Whitaker's Almanack, which may be splitting hairs, lists it at six miles larger, and its square miles of land is worth a lot of money, even to careless cartographers.

However, in this case the World Almanac (without a h) corroborates the British Almanac (with one).

The case of India is far more serious. The Statesman's Year Book lists the area of British India, provinces at 1,385,322 square miles, an estimate that is backed by the World Almanac, but Whitaker's Almanack, with magnificent largesse in a very rough guess, declares the area is 1,300,000 square miles—as if the old 1,345,000 square miles were more drop in the bucket.

The most remarkable in that the difference is larger than that the British Isles, and it is not a negligible or approximate example of British largesse.

The divergence of estimates for the size of the whole British Empire is complete. Nobody knows how large it is. The London Times Atlas of the World, for example, estimates the area at 13,729,000 square miles. The Statesman's Year Book puts it a good deal more, and the World Almanac, taking an independent stand, declares its area is 13,729,000 square miles.

It is pointed out that unless better records of the Empire are kept honestly may one day be able to count the square miles and never be caught.

It is pointed out that unless better records of the Empire are kept honestly may one day be able to count the square miles and never be caught.

## Making Hay On The Prairies

Area Under Hay In Prairie Provinces

Exceeds 3,000,000 Acres

There has been a very rapid increase in the quantities of hay produced in the Prairie Provinces in recent years. Ten years ago the area under hay in the three provinces was only 2,000,000 acres.

In 1925 it was nearly 3,000,000 acres. Although the clear weather and dry atmosphere of the prairie during the haying season constitute ideal conditions several precautions must be taken to assure a crop of good quality.

The superintendent of the Indian Head Experimental Farm points out that four factors determine quality in hay: colour, odor, presence of leaves and freedom from dust and mold, and it is with these considerations in mind that the farmer must cut and cure his crop.

The first consideration is to cut at the proper stage. Alfalfa should be cut in the early bloom stage when the new shoots are starting from the crown, sweet clover in the early bud stage, leaving the top stubble, timothy in the second bloom stage, and oat hay in the late milk stage for oats and in the dough stage for horses.

In curing hay it is most important to retain the leaves. In the case of alfalfa the crop should not be stored until the moisture content has been reduced sufficiently.

Palatability in hay is a consideration of great importance. To attain this quality the crop should not be stored until the moisture content has been reduced sufficiently.

Palatability in hay is a consideration of great importance. To attain this quality the crop should not be stored until the moisture content has been reduced sufficiently.

## Salt On British Isles

Would Make Country Barren If Rivers Did Not Carry It Back to Ocean

That the whole island of Great Britain is being sprinkled with salt, as if from a gigantic salt shaker, is the conclusion recently announced to the Literary and Philosophical Society of the city of Manchester, England, by William Irwin.

The salt comes from the sea and most of it falls on the land surface, not as dry salt, but as salt dissolved in the British rain water.

Mr. Irwin has analyzed rain water collected at 12 different points in England and Wales, both at times of high water, and during violent storms blowing from the sea. Averaging the data, with proper calculations of the amount of rainfall and so on, he finds that about 1,000,000 tons of salt fall each year on England and Wales alone.

This amount of salt soon would render the land a barren desert. The salt and sand of the Sahara, were it not for the fact, it is explained, that the salt is carried back to the sea again in the water of the brooks and rivers of Great Britain, and is dissolved and carried down by the rain.

The amount of salt sprinkled on the land is much greater, as was expected, during or just after violent storms from the sea than at times of calm.

The source of the salt is believed to be the sea. The salt is carried up from the surface of the ocean during storms and dried in the air to tiny particles of salt dust. These then blow inland and are dissolved and carried down by the rain.

The source of the salt is believed to be the sea. The salt is carried up from the surface of the ocean during storms and dried in the air to tiny particles of salt dust. These then blow inland and are dissolved and carried down by the rain.

## Canada's Fruit Crop

Value Last Year Estimated At Over Forty Million Dollars

An attractive rural livelihood is being carried on in widely separated sections of Canada. By increasing thousands of people engaged in fruit raising. The value of the commercial fruit crop last year was estimated at \$20,215,956 while probably an equal quantity was used for local consumption.

The fruit without passing through commercial channels.

Soil and climate of Canada are well adapted to fruit culture. The Niagara Peninsula, the Okanagan Valley, and the Okanagan district of British Columbia, having achieved world fame through their products.

While earlier settlers had founded the fruit industry more than a century before it was not until 1881 that the first experimental shipment of apples was made from the Okanagan Valley in Nova Scotia. By 1920 the average crop in Nova Scotia was about 100,000 barrels. Nineteen years later it had reached 1,000,000 barrels and in 1911 the record total of 1,000,000 barrels was reached. In 1919 the new mark of 2,000,000 barrels was set.

Commercial fruit growing in British Columbia is of recent origin but progress has been rapid. In 1881 there were only 6,000 acres under fruit. By 1921 this had been expanded to 42,500 acres, and while the figures have not been compiled since the last figures of that year, it is known that the area has been further increased until it now stands in the neighborhood of 50,000 acres.

## THE WALL OF CHINA

In 214 B.C., the Chinese commenced building the Great Wall, which isolated their country from the rest of the world and helped retard their national progress.

The business man who maintains a wall of "dig-nified reserve" towards the buying public is just as surely retarding his own business growth.

Your advertisement in The Review-Advertiser would be a standing invitation to your store. When our readers open up their paper do they see your "hid"?

## LOTS OF LOW-PRICED TIRES — And OURS are GOODYEARS

SOME of our good friends went elsewhere for tires when rubber was high. They had to have low price and we couldn't give them both low price and Goodyear quality.

Today we can. We can give you a Goodyear Tire for no more than you were paying for 'gyp' tires. Ask us for prices.

Every cord and bal-loon in the list built with SUPER-TWIST Cords. Every tire with a tough, rugged tread. Come in and see them.

## ODD FELLOWS HOLD ENJOYABLE PICNIC

Odd Fellows and their families of Claresholm and Staveland held a very enjoyable picnic at the beautiful Willow Creek picnic grounds on Wednesday.

The afternoon was spent in boating, bathing, swimming, base ball, etc. The Staveland team defeated Claresholm at baseball.

About 6 o'clock the tables were set and full justice done to the good things provided. There were also ice cream, lemonade, candy and peanuts in abundance.

After the eatables were disposed of races for all ages were pulled off, and moved highly entertaining to the crowd.

## Claresholm Beats Calgary Athletics in League Game

The home team beat the Athletics last Saturday in a league game. There were seven home runs knocked up of which two were contributed by Tiny Thompson.

Dutch Gator performed in the box for Claresholm. The Athletics counted up six runs in the first five innings while the home team were unable to register a score until the fourth when Gator cracked a homer with the bases full making the score 6 to 4. In the fifth the Athletics connected for a homer with two on bases and Claresholm replied with runs by Scott, Thompson, Lewis and Kennedy.

In the sixth Brown scored a homer for the Athletics and thereby chasing two in ahead of him. In Claresholm's half Kennedy collected a homer with two on bases. Calgary failed to score in the seventh and the home team secured five runs—one of which was a home run by Thompson.

Another homer by the Athletics left the final score 16 to 12, the game being then called on account of darkness.

Claresholm: Scott c.; Kirk r.f.; Thompson, s.s.; Lewis, 3b.; Gator, p.; Geddes, c.f.; Callahan, Th.; Ozunt, 2 b.; Kennedy, 1b.

Athletics: Mastel, r.f.; Martin, s.s.; Savage, 3 b.; McLauchlin, 2b.; Richardson, c.f.; Killen, Th.; Huffman, c.f.; Hornard, c.; Brown, p.

Umpires: Murphy and Amundsen.

## CROSS-HUNT

A very pretty home wedding took place in Noldford on Wednesday evening at 8 o'clock, at "Journey's End," the home of Mr. and Mrs. Fred W. Hunt, when their daughter Edith Lillie Isabelle was given in marriage to Rev. Wilbert Franklin Cross, of Wistie, Alberta.

For the strains of a wedding wedding march, the members of the wedding party came into the front room, taking their places under a beautifully prepared canopy. The bride was accompanied in the march by her father. The bride was tastefully dressed in white silk, and wearing a bird veil. She carried a bouquet of roses. The bridesmaid, Miss Ivy Hunt, sister to the bride, was dressed in flowered silk, and carried a bouquet of snapdragons. Mr. John G. Cross, brother of the groom, was best man. Rev. A. H. Eggleston, pastor of the local Church of the Nazarene, was officiating clergyman.

After the ceremony was performed, a delightful wedding supper was served to about fifty people, including the guests. Following the supper, several impromptu speeches were offered. Rev. and Mrs. Cross expect soon to engage in pastoral work for the Church of the Nazarene. The best wishes of hosts of friends accompany them at this time.

Mrs. W. J. Clifton has received the following acknowledgment from Rev. George Wood:

Dear Mrs. Clifton—Thanks very much for your letter with M. O. for \$36.00. We are very grateful for this help and we hope that many of the friends will be able to come and visit our new home and see the children. We have 49 in total and a few coming in this week.

Yours sincerely,  
George Wood

# Introducing The New Vogue

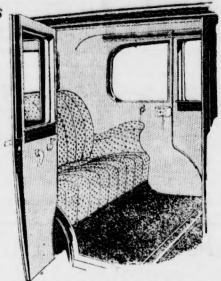

Interior Color Harmonies  
that match the lovely  
effect of the Drawing  
Room

McLAUGHLIN-BUICK  
for 1928 sets a new vogue  
in motor car design—

—A vogue for faithfully reproducing in closed car interiors the exquisite matching of colors . . . the tasteful harmony of appointment . . . the luxurious comfort with which skillful decorators have endowed our finest drawing rooms.

Rich fabrics, covering walls and ceilings, blend pleasantly with exterior finishes, forming a neutral background for matching or contrasting interior effects.

Form-fitting tailored seats are upholstered in attractive materials of the finest quality. Carpets of pleasing pattern add a touch of lively color. Even the interiorware is carefully

fully selected for its decorative effect, that the complete ensemble may be in perfect taste.

Now you can have a motor car as charming as your drawing room—a McLaughlin-Buick for 1928. See these lovely closed cars at the nearest branch or dealer showroom.
